

SOLUTIONS IN PRACTICE

CALTEX SERVICE STATION, DIRECK

Hydro Construction Products recently used the new Mearin Plus drainage channels for the construction of a new Caltex Service Station in Direck, South Australia. Light weight and easy to install, the robust glass reinforced polyester (GRP) channels were the ideal drainage solution for this project.

Heavy Duty Ductile Iron grates were installed using the innovative bolt and tool free STARFIX quick fastener system thus preventing loose or rattling grates and longitudinal displacement.

The 300mm clear opening width channels are installed with plug-in edges which are clipped onto the channel with no screws, drilling or permanent fixing. This process results in a quick and easy assembly.

Mearin Plus and Mearin Expert GRP channel systems are available in 100, 150, 200 and 300 clear opening widths and come in various depths for a range of applications up to AS3996 Class F.

MEARIN PLUS

Products Used:

Mearin Plus 300 with Pre Sloped Fall

Ductile iron slotted grate
