

SOLUTIONS IN PRACTICE

REGIONAL RAIL LINK, VICTORIA

As part of the Victorian Regional Rail Link project Footscray, West Footscray and Sunshine Stations all underwent major upgrades to cater for the increased volume of commuters travelling through these stations. The major infrastructure project focused on increasing metropolitan and regional rail capacity as well as passenger safety and accessibility.

Distributed by Hydro, the MEA Solution LZ1000/60 was specified as a linear drainage solution for the station platforms, forecourts and overpasses. Given the shallow 60mm depth of the channel the MEA Solution was able to be installed where varying depth restrictions existed.

Various Hydro drains, complete with heelguard anti-slip rates, were used in several locations to ensure efficient drainage and compliance with all pedestrian safety requirements.

Solution

Products Used:

- LZ1000/60
- Ductile Heelguard Grate
- Stainless Heelguard grate
