

SOLUTIONS IN PRACTICE

WOOLWORTHS MEAT PROCESSING PLANT, VICTORIA

Woolworths \$150 million meat processing facility located in Victoria was designed to keep pace with the company's expanding fresh and value-added meat retailing operations across Eastern Australia.

The state-of-the-art facility required a high-spec drainage system to cope with the high volume of water and debris during programmed wash-down periods and the capability of being completely dry prior to production runs.

The Hydro Stainless Foodpro was the preferred modular system. Fabricated in grade 316 stainless steel the drains incorporated design elements such as a sloped base for increased hydraulic performance, inline sumps to catch debris and slip resistant grates to withstand forklift traffic whilst being safe for workers.
